Rebecca Kase

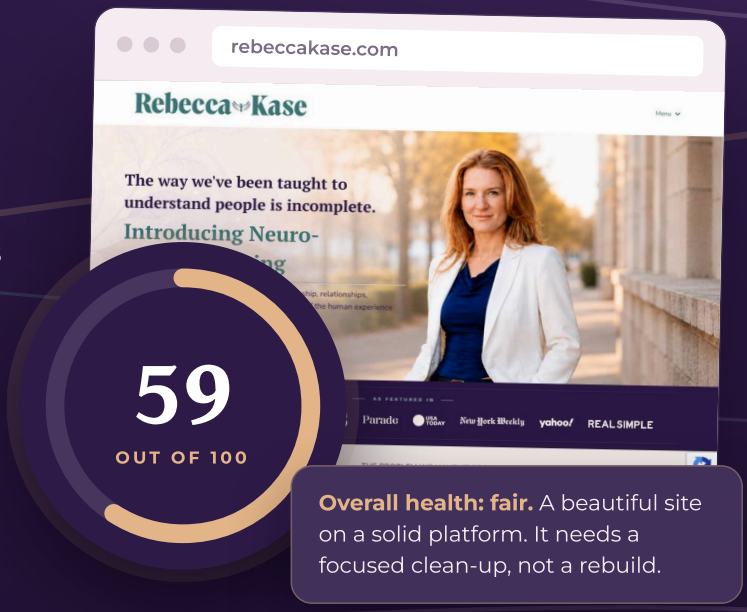

OCTOBER 2026

WEBSITE HEALTH CHECK

rebeccakase.com, *checked page by page*

A plain-English look at what is working, what is broken and what to fix first. Every finding links straight to the page it is on.

50 pages | 428 links tested | Desktop + mobile | Google Lighthouse

THE SHORT VERSION

Strong first impression. Messy behind the scenes.

The site opens beautifully: a clear message, warm photography and press logos that build trust in seconds. Underneath, it has grown in layers. An older version of the site still lives next to the new one, some links lead to dead ends, a few pages still show unfinished text, and the pages are heavy for a phone to load. None of this needs a redesign. Most of it is a few focused hours of clean-up.

50

Pages checked

Every page in the site's sitemap (blog tag listings aside), for errors, titles, headings and images.

428

Links tested

Every link on every page, including links to outside sources.

20

Broken links

They show up in 29 places. Nine point to the site's own pages, including course and toolkit links.

6.2 MB

Homepage size

A healthy target is under 2 MB. The Speaking page is 14 MB.

203

Images with no description

Out of 319 images. Screen readers and Google cannot tell what they show.

11

Test pages live on Google

Pages like "Home Page 2" and "Blank Page" that visitors should never see.

HEALTH SCORES

Eight areas, scored out of 100

Broken links

NEEDS WORK

20 links lead to dead pages, including links meant to sell courses and toolkits.

Finding things

NEEDS WORK

Two different menus, and the workbook, podcast and retreats are missing from the main one.

Speed

NEEDS WORK

Key pages weigh 5 to 14 MB because images are uploaded far larger than they are shown.

Mobile & design

FAIR

Works on phones with no sideways scrolling. Some text sits on top of photos.

Google search

FAIR

Strong article titles, but the About and Speaking pages show up as "About 2026" and "Speaking 2026".

Accessibility

FAIR

Two out of three images have no description, and some text is hard to read.

Content polish

FAIR

A visible placeholder, "launching soon" offers that are gone, and leftover template text.

Trust & legal

NEEDS WORK

No privacy policy, even though the site collects names and emails.

How the scores work: Google search and accessibility start from Google Lighthouse results across 10 key pages, then adjust for issues found by hand. The other areas are scored on what was found: how many problems, and how much each one affects a visitor. Treat them as a guide to where the effort will pay off most.

CREDIT WHERE IT IS DUE

What is already working well

Every page loads
All 50 pages open without errors, the whole site is secure (https), and old web addresses forward to the right place.

A clear, confident message
The homepage says what you do in one line, backed by warm photography and "As featured in" logos such as Forbes, U.S. News and Real Simple.

The workbook checkout works
The Thrive Workbook button leads straight to a working $29 checkout page.

Thoughtful, in-depth articles
20 articles, many of them 1,500 to 3,000 words, and each one has its own Google title and description.

Phone-friendly layout
No page tested scrolls sideways on a phone, and the menu folds away neatly.

A friendly dead-end page
When a link breaks, visitors see a branded "Page not found" screen with a button back home, not a raw error.

IF YOU ONLY DO FIVE THINGS

Fix these first

These five changes fix the problems visitors are most likely to hit, and the ones most likely to cost sales or bookings.

1

Repair the 20 broken links

Five articles send readers to a "Nervous System Reset Course" page that no longer exists, and two more promote a toolkit page that is gone. Those are exactly the clicks most likely to turn into sales.

EFFORT
About 1 hour

DETAILS
Section 1

2

Put your offers in the main menu

Thrive the Workbook, Books, Press, the Podcast, Retreats and Corporate Programs are not in the main menu. Eight pages still show an older menu that points to old versions of the About and Speaking pages.

EFFORT
1 to 2 hours

DETAILS
Section 2

3

Shrink the images

The homepage is 6.2 MB and the Speaking page is 14 MB. On a phone that means a long wait, and Google can rank slow pages lower. Resizing and compressing images can cut most pages by more than half.

EFFORT
2 to 3 hours

DETAILS
Section 3

4

Add a privacy policy

Sign-up forms appear across the site and it sells a workbook, but there is no privacy policy or terms page anywhere. Privacy laws and careful visitors both expect one.

EFFORT
About 1 hour, plus a quick legal review

DETAILS
Section 8

5

Tidy up what Google shows

Your two most important pages appear in Google as "About 2026" and "Speaking 2026", and 11 test pages such as "Home Page 2" and "Blank Page" are public.

EFFORT
About 30 minutes

DETAILS
Section 5

SECTION 1

01 Broken links

50 NEEDS WORK

A broken link sends a visitor to a "Page not found" screen. On this site, most broken links sit inside articles, right at the moment a reader is ready to take the next step.

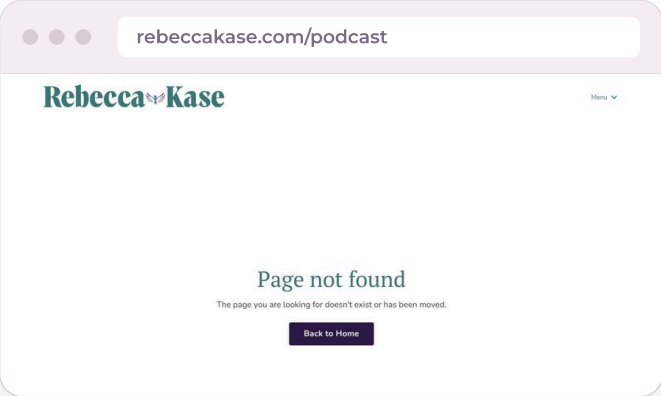

9 links point to pages on your site that no longer exist

● FIX NOW

These matter most because they lead away from your own offers. Each row shows where the link is, what it says, where it goes today and where it should go instead.

ON THIS PAGE	LINK TEXT	GOES TO (DEAD)	POINT IT TO
Your Nervous System: The Secret to Business Success The Healing Power of Sleep: How Rest Reshapes Trauma Recovery How Neuro-Informed Living Reduces Stress and Builds Resilience 5 Daily Habits to Support a Neuro-Informed Lifestyle Polyvagal Theory: Understanding Your Nervous System for a Better Life	*"Nervous System Reset Course"*	/NeuroInformedLivingHubCoursesPage	A current offer, such as your free guide at /foundations-neuro-informed-living, or remove the link
The Nervous System Advantage Your Nervous System: The Secret to Business Success	*"Nervous System Reset Toolkit / Get the toolkit now!"*	/nervous-system-reset	A current offer, or remove the link
The Nervous System Advantage The Science Behind Happiness: How Your Brain Shapes Joy	*"Join the waitlist... / The Business Accelerator"*	/businessaccelatorwaitlistpage	/contact, or remove until the program launches

ON THIS PAGE	LINK TEXT	GOES TO (DEAD)	POINT IT TO
/thrive-workbook-thank-you	*"Check out the podcast"*	/podcast	/Podcast (the real address has a capital P)
What to Do After a Hard Conversation	*"a reorganization exhaust a team"*	/blog/[[POST-6-SLUG]]	This is an unfilled placeholder. It most likely belongs to /blog/why-uncertainty-at-work-is-exhausting
The Science Behind Happiness: How Your Brain Shapes Joy	*"here."*	/blog/the-role-of-the-vagus-nerve-in-self-regulation-and-emotional-resilience	/blog/vagus-nerve-self-regulation
The Nervous System Advantage	*"Read more in my article Why Understanding Your Nervous System..."*	/blog/why-understanding-your-nervous-system-is-the-secret-to-business-success	/blog/nervous-system-business-success
Regulate to Rise: How a Healthy Nervous System Fuels Business Growth	*"Contact me to learn more..."*	/Business-Coaching	/contact
5 Daily Habits to Support a Neuro-Informed Lifestyle	*"Neuro-Informed Living"*	/neuro-informed-living	/foundations-neuro-informed-living

What a reader sees after clicking any of these links. The page is friendly, but it is a dead end.

QUICKEST WAY TO FIX

Open each article in Kajabi, click the linked words, and paste in the new address from the last column. Where an offer no longer exists, link to what you offer today, or simply remove the link.

11 source links in your articles are dead or forward somewhere else

FIX SOON

Citing respected sources builds trust. When those sources move or disappear, the article looks out of date, and Google treats lots of dead links as a sign that a site is not looked after.

IN THIS ARTICLE	SOURCE	WHAT HAPPENS NOW
Mindful Boundaries: Protecting Your Energy Through a Polyvagal Lens	NICABM: a polyvagal approach to working with shame	**Page not found (404). The link also sits on a single letter, "s".**
Mindful Boundaries: Protecting Your Energy Through a Polyvagal Lens	Therapas: introduction to polyvagal theory	**Page not found (404)**
The Science Behind Happiness: How Your Brain Shapes Joy	Nature Neuroscience article	**Page not found (404)**
The Science Behind Happiness: How Your Brain Shapes Joy	Harvard Health: the science of happiness	**Page not found (404)**
Your Nervous System: The Secret to Business Success	Brain-Based Wellness (2 links)	**Forwards to a "not found" page**
5 Daily Habits to Support a Neuro-Informed Lifestyle	Harvard Health Publishing (exercise)	**Page not found (404)**
5 Daily Habits to Support a Neuro-Informed Lifestyle	Harvard Medical School (breath control)	**Page not found (404). The address is misspelled ("contro").**
5 Daily Habits to Support a Neuro-Informed Lifestyle	Changi General Hospital (grounding techniques)	**Page not found (404)**
How Neuro-Informed Living Reduces Stress and Builds Resilience	Coacharya (2 links)	**Page not found (404)**
How Neuro-Informed Living Reduces Stress and Builds Resilience	Nuvance Health	**Now forwards to a general Northwell Health news page**
Polyvagal Theory: Understanding Your Nervous System for a Better Life	Massachusetts General Hospital	**Now forwards to a general search page**

HOW TO FIX Search the source site for the same article (it has often just moved to a new address), or swap in a current source. Remove the link if neither works.

The Thrive Workbook page links to Kajabi's Twitter account

FIX NOW

A social icon on Thrive the Workbook goes to twitter.com/kajabi, the platform's own account, instead of yours.

HOW TO FIX Change it to your own X (Twitter) profile, or delete the icon if you are not active there.

SECTION 2

02 Finding things

52 NEEDS WORK

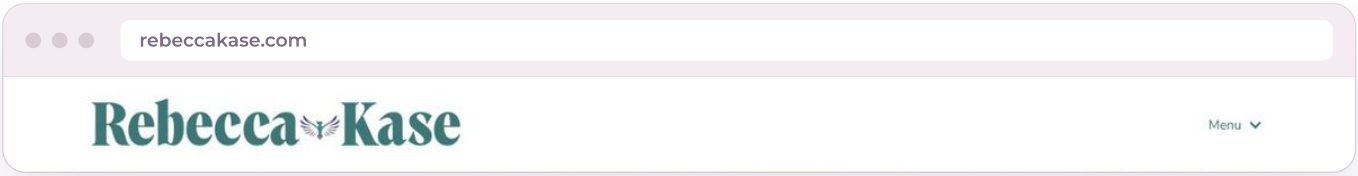

Visitors decide in seconds whether they can find what they came for. Right now the site has two menus, and some of your best offers are hard to reach.

Two different menus across the site

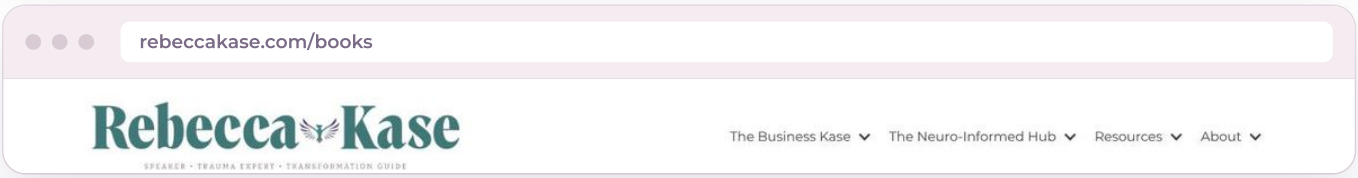

● FIX NOW

Most pages use the new menu. Eight pages still use an older one with different choices: Books, Press, Thrive the Workbook, Podcast, Resources, Corporate Programs, Foundations guide, Business coaching form.

The old menu sends visitors to your **old** About and Speaking pages, and its "Contact" link opens the business coaching form instead of your Contact page.

New menu (homepage and most other pages). On a laptop it shows only a small "Menu" button.

Old menu (Books, Press, Thrive the Workbook and 5 more pages).

HOW TO FIX — Give these eight pages the same header and menu as the homepage.

Your offers are missing from the main menu

FIX NOW

The main menu offers About, Speaking, Explore My Work, Blog, Contact and the Trauma Therapist Institute. These pages are not in it:

- Thrive the Workbook (your $29 workbook)
- Books
- Press
- Thrive: The Podcast
- Retreat waitlist
- Corporate Programs and Consulting
- Resources

The Podcast is only linked from a thank-you page, and the Resources page is not linked from anywhere at all.

HOW TO FIX

Add two dropdowns to the main menu, for example **Work With Me** (Speaking, Corporate Programs, Retreats) and **Resources** (Thrive Workbook, Books, Podcast, Free Guide). Featuring them on the Explore My Work page also helps.

Duplicate pages compete with each other

FIX SOON

Two About pages and two Speaking pages are live at the same time: /about and /aboutRebeccaKase, and /speaking and /speaking-keynotes. The business coaching form page /businesscoachingformpage also has exactly the same Google title as the Contact page. Google has to guess which one to show, and visitors may land on the older version.

HOW TO FIX

Keep the newer version of each, update any links that point to the old ones, then unpublish the old pages.

Homepage cards send icons and buttons to different pages

FIX SOON

In the "Ways to Work Together" cards on the homepage, the small icon and the button underneath it go to different places:

- Microphone icon: old Speaking page. Button "Book Rebecca": new Speaking page.
- Feather icon: Books page. Button "Explore Works": Explore My Work.
- Person icon: old About page. Button "Meet Rebecca": new About page.

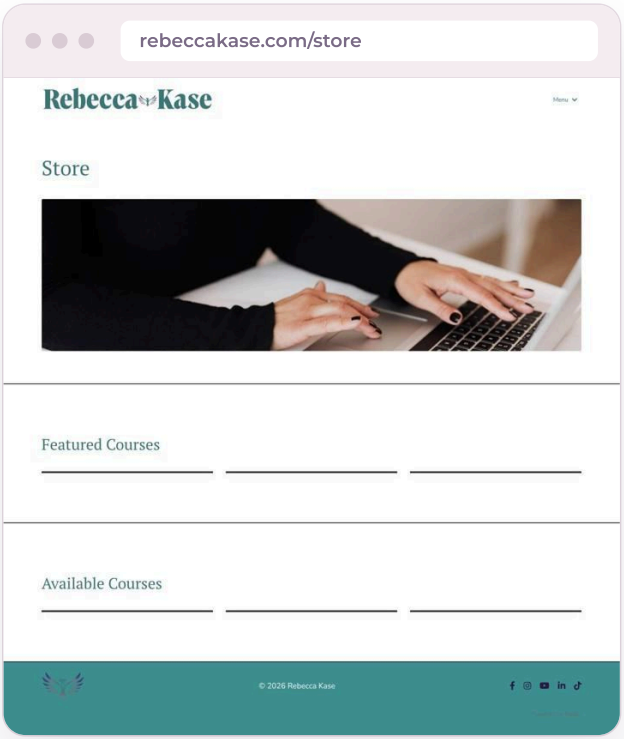

HOW TO FIX

Point each icon to the same page as its button.

The Store page is empty

● FIX SOON

/store shows "Featured Courses" and "Available Courses" with nothing underneath. It is not in the menu, but it is live, listed for Google, and even borrows the homepage's Google title.

The Store page as visitors see it today.

HOW TO FIX

Add the Thrive Workbook and any courses, or unpublish the page.

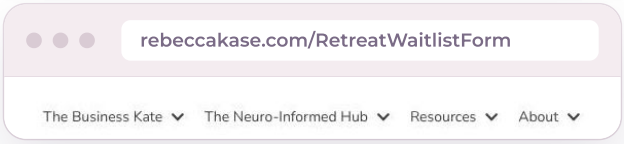

Two typos in the old menu

● FIX NOW

The Press page menu says **"The Nuero-Informed Hub"** and the Retreat page menu says **"The Business Kate"**.

"Nuero" should be "Neuro".

"Kate" should be "Kase".

HOW TO FIX

Correct the spelling, or switch these pages to the new menu, which fixes both at once.

SECTION 3

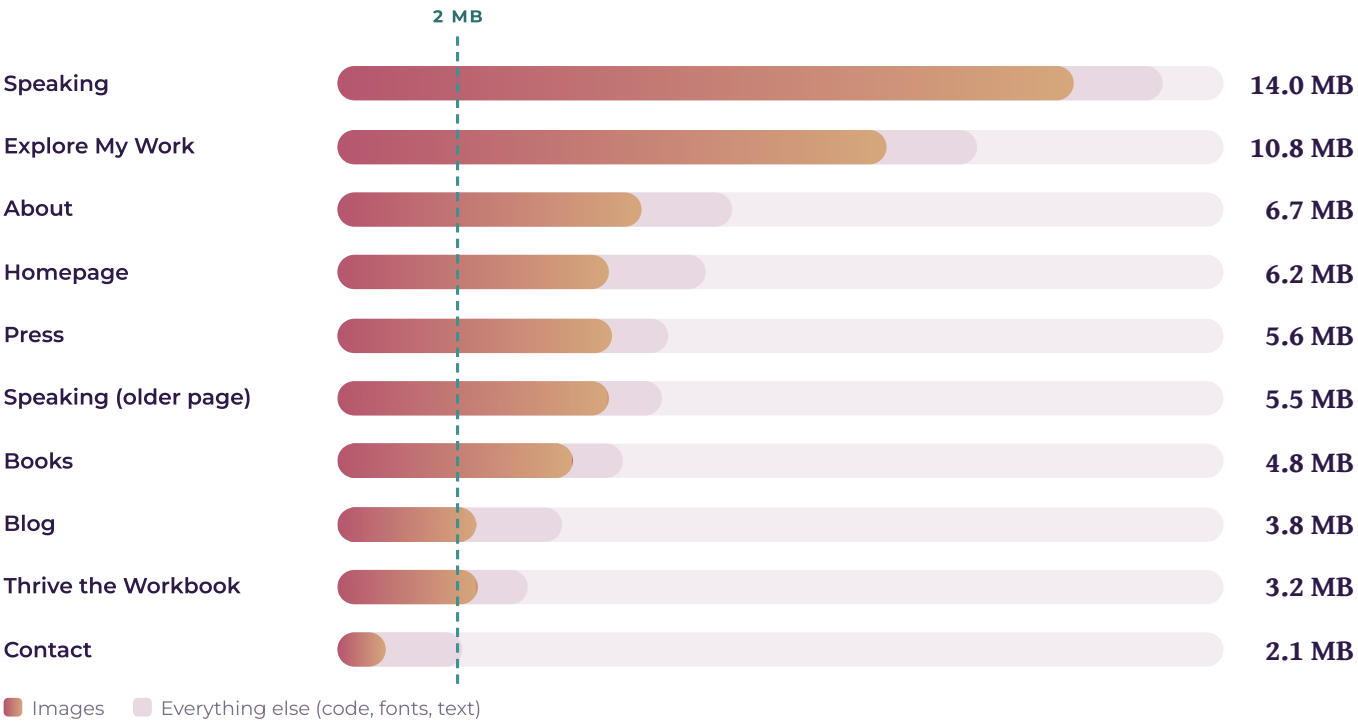

03 Speed

42 NEEDS WORK

Page size is how much a phone has to download before a page appears. Under 2 MB is a healthy target. Several key pages are three to seven times that, mostly because of images.

How much a visitor downloads, page by page

Measured on a first visit with nothing saved in the browser. The dashed line is a healthy 2 MB target.

Photos are uploaded far larger than they are shown

FIX NOW

Many photos are saved as large PNG files of 1 to 1.5 MB each. A photo shown 500 pixels wide on screen does not need to be 1,500 to 2,400 pixels wide.

WHERE

- Speaking: 8 images over 1 MB each
- Explore My Work: 5 images over 1 MB
- Homepage: 2 images over 1 MB, plus one at almost 1 MB
- About: 2 images over 1 MB

HOW TO FIX

Before uploading, resize photos to the size they are shown (about 1,600 pixels wide for full-width banners, 800 for cards), save them as JPG or WebP, and run them through a free compressor such as Squoosh or TinyPNG. Aim for under 300 KB per image.

Tiny icons are uploaded as huge images

FIX NOW

The small icons on the homepage (shown about 50 pixels wide) are 2,000-pixel images. There are 10 of them on the homepage alone.

HOW TO FIX

Re-export the icons at 100 to 150 pixels wide, or as SVG files.

A pop-up image loads on 27 pages, even when nobody opens it

FIX SOON

The "Get your copy today" pop-up includes a 1.3 MB image. The homepage, the blog, all 20 articles and several other pages download it on every visit, whether or not the pop-up is opened.

HOW TO FIX

Compress that one image to under 200 KB. It is also used in the homepage's "Start Here" section, so this single change speeds up 27 pages.

SECTION 4

04 Mobile & design

72 FAIR

Many visitors will meet the site on a phone. The good news: nothing scrolls sideways and the menu folds away neatly. A few layout issues make some pages harder to read.

On phones, the opening text sits on top of the photo

● FIX SOON

On the Homepage, Speaking and Explore My Work pages, the headline and intro run across Rebecca's photo on a phone screen, which makes them hard to read.

Homepage, Speaking and Explore My Work on an iPhone-sized screen.

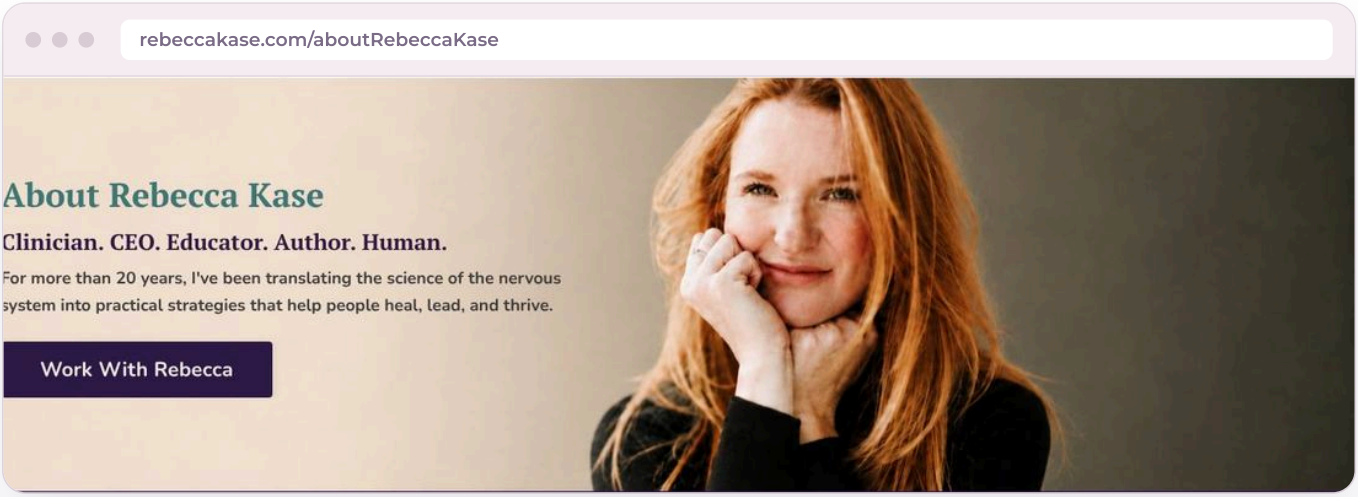

HOW TO FIX

For phone screens, place the photo above or below the text, or add a soft color overlay behind the words.

About page: the heading is pushed against the screen edge

FIX SOON

On a laptop, the About page heading, text and button start right at the left edge of the screen, with no breathing room.

About page on a 1440-pixel laptop screen.

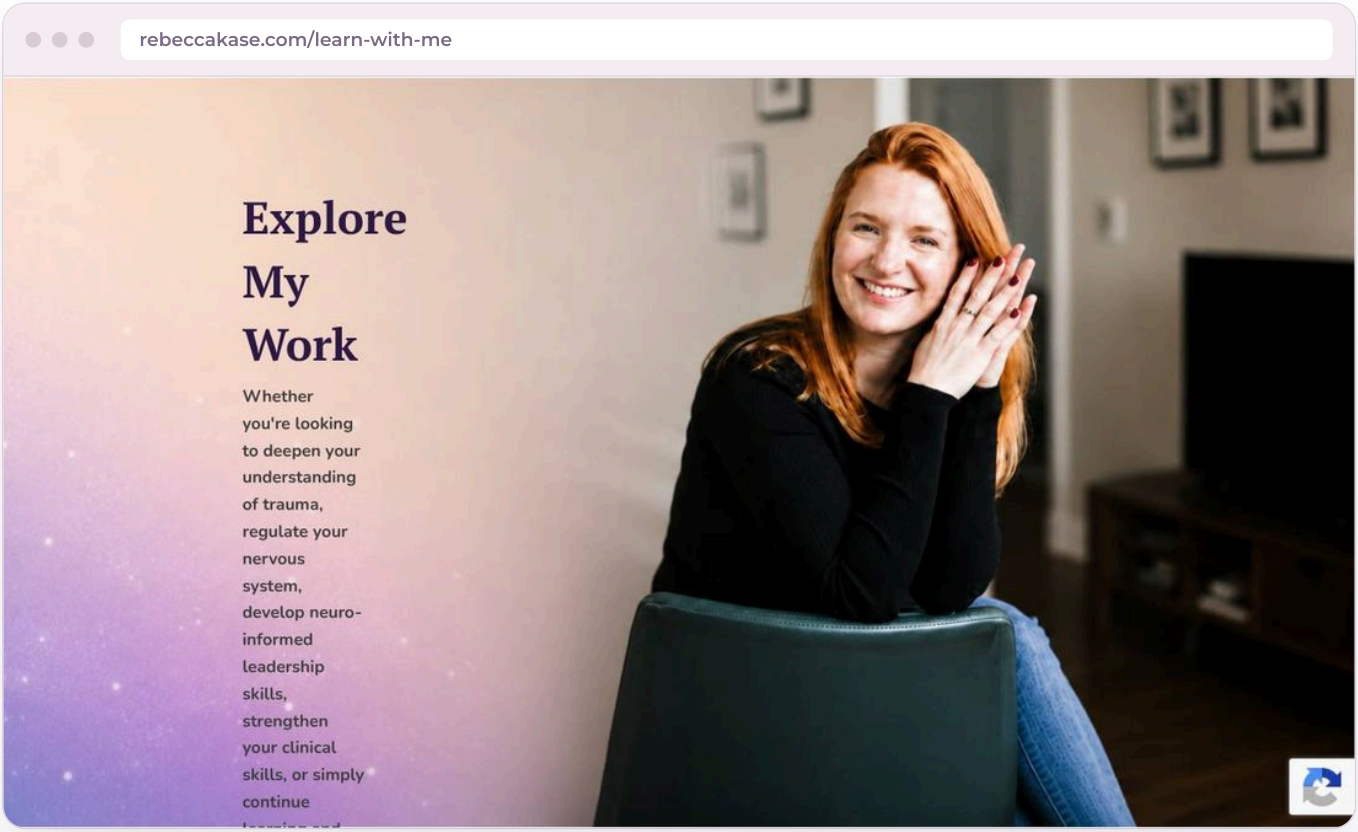

HOW TO FIX

Add left padding to that section so it lines up with the logo above it.

Explore My Work: the intro is squeezed into a thin column

FIX SOON

On a laptop, the intro on Explore My Work shows one or two words per line, so a short paragraph becomes a long, narrow strip.

Explore My Work on a 1440-pixel laptop screen.

HOW TO FIX — Widen the text column so each line holds roughly 8 to 12 words.

On a laptop, the menu hides behind a small "Menu" button

FIX SOON

On the homepage and the other new pages, a full-size laptop screen shows only the word "Menu" in the corner (see the new menu in Section 2). Visitors have to discover it before they can see any options.

HOW TO FIX — Show the menu items in full on larger screens, so every option is one click away.

The spam-check badge covers the bottom-right corner

NICE TO HAVE

The small Google reCAPTCHA badge floats over content on every page, including on phones.

HOW TO FIX — Google allows hiding the badge as long as a short line such as "This site is protected by reCAPTCHA" appears near each form.

Some pages jump while they load

NICE TO HAVE

On the Podcast, Corporate Programs, Contact and Books pages, content shifts as images appear. It makes visitors lose their place or tap the wrong thing.

HOW TO FIX This usually improves with the image resizing in Section 3.

SECTION 5

05 Google search

70 FAIR

These are the details Google reads to decide when to show the site and what to say about it. The articles are in good shape. The main pages need attention.

89 **Search basics**
Google Lighthouse, average of 10 key pages

82 **Accessibility**
Google Lighthouse, average of 10 key pages

79 **Best practice**
Google Lighthouse, average of 10 key pages

Your most important pages have placeholder titles

FIX NOW

The page title is the blue headline people click in Google. Your About and Speaking pages, the two you most want found, are titled "About 2026" and "Speaking 2026".

PAGE	TITLE GOOGLE SHOWS NOW	SUGGESTED TITLE
/aboutRebeccaKase	About 2026	About Rebecca Kase | Clinician, CEO, Educator, Author
/speaking-keynotes	Speaking 2026	Keynote Speaker on Neurobiology & Trauma | Rebecca Kase
/blog	Articles	Nervous System and Leadership Articles | Rebecca Kase
/learn-with-me	Learn With Me	Explore My Work: Books, Courses, Resources | Rebecca Kase
/books	BooksRebecca Kase Books | Polyvagal, EMDR & Resilience Tools	Books by Rebecca Kase | Polyvagal, EMDR & Resilience
/press	Press | Media	Press and Media | Rebecca Kase
/podcasts/the-humble-therapist	the Humble therapist	The Humble Therapist Podcast | Rebecca Kase
/store	The same title as the homepage	Store | Rebecca Kase (or unpublish the page)

HOW TO FIX

Each page's title can be changed in its SEO settings in Kajabi. Keep titles under about 60 characters.

11 test and leftover pages are public and listed for Google

FIX NOW

These pages are in the site's sitemap, so Google is invited to show them. Several still say "© 2026 Kajabi" in the footer, and one test homepage alone weighs over 10 MB.

Home Page 1 · Home Page 2 · Home Page 3 · Blank Page · Blank Page (copy) · Blank Page (copy) · Newsletter Opt In · Rebecca Kase Email Sign up · Thrive Workbook Thank you · Foundations Thank you · Newsletter Thank You

HOW TO FIX Unpublish or delete the test pages (Home Page 1 to 3, the Blank Pages and the two opt-in test pages). Keep the thank-you pages, but hide them from search results (a "noindex" setting or tag does this).

Missing page descriptions

FIX SOON

The description is the one- or two-line summary under a Google result. It is missing on Corporate Programs, Retreat Waitlist and Resources, so Google makes up its own.

HOW TO FIX Write one or two inviting sentences (about 150 characters) for each, in the page's SEO settings.

Pages with no main heading, or with several

FIX SOON

Each page should have exactly one main heading (H1) that says what it is about.

WHERE
No main heading: About, Contact, Thrive the Workbook, Podcast, Corporate Programs, Resources, Speaking (older), Foundations guide
More than one: Homepage (2), Speaking (2), Explore My Work (3)

HOW TO FIX In the Kajabi editor, set the page's main title to "Heading 1" and use smaller heading levels for everything else.

Two article addresses contain spaces and slashes

NICE TO HAVE

Your Nervous System Is Running the Meeting and What Stress Actually Does to the Way You Think have spaces and an extra slash coded into their web addresses, which look messy when shared and can confuse some apps.

HOW TO FIX Use short, lowercase, hyphenated addresses such as /blog/nervous-system-running-the-meeting. If you change an address, update any links to it.

Spelling slips in blog topic tags

NICE TO HAVE

Two topic tags are misspelled: "intentional brething" and "nutirition". They appear in the blog's category list and are listed for Google.

HOW TO FIX Rename the tags to "intentional breathing" and "nutrition".

Generic and misspelled image file names

NICE TO HAVE

Google reads image file names. Many are generic (such as "Website_icons_1_.png", "file_000000005ee0...png" or "ChatGPT_Image_Jul_17_2026...png") or misspelled ("RebecaKaseinterview.png", "RebeccaKsestagewave.png", "Rebecca_Case_-_The_Thrive_Workbook_Course.png", "Science_Behing_Happiness").

HOW TO FIX Rename files before uploading, for example "rebecca-kase-keynote-stage.jpg".

No preview image when some pages are shared

NICE TO HAVE

When Corporate Programs, Retreat Waitlist, Resources or the older About page is shared on LinkedIn or Facebook, no picture appears with the link.

HOW TO FIX Set a social sharing image in each page's SEO settings.

No structured data, and the sitemap is not submitted

NICE TO HAVE

Structured data is hidden code that tells Google facts directly: that you are an author and speaker, your books and your social profiles. None of the pages have it. Separately, the sitemap at rebeccakase.com/sitemap.xml is not referenced in the site's robots file.

HOW TO FIX Submit the sitemap in Google Search Console (free), which also shows which searches bring visitors. Then add a small "Person" structured-data block to the homepage through Kajabi's page scripts setting.

SECTION 6

06 Accessibility

68 FAIR

Accessibility means everyone can use the site, including people who use screen readers or have low vision. It helps Google too, because Google reads a page much like a screen reader does.

203 of 319 images have no description (alt text)

FIX SOON

Screen readers skip these images or read out the file name, and Google cannot tell what they show. The worst pages:

WHERE

- Homepage: 14 of 16 images
- Press: 14 of 17
- Speaking: 13 of 15
- Explore My Work: 8 of 10
- Every article: 4 to 7 images each

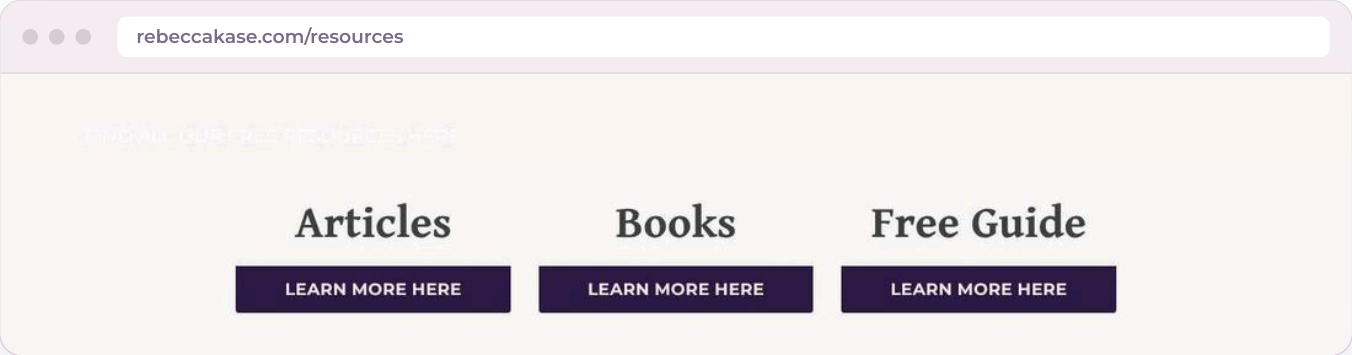

HOW TO FIX

Add a short description to every meaningful image, for example "Rebecca Kase speaking on stage about leadership". Purely decorative images can be left empty on purpose.

Some text is hard to read

FIX SOON

White text on the teal buttons and the teal footer is below the contrast standard, and Google Lighthouse flags low-contrast text on every page tested. On the Resources page, the line "FIND ALL OUR FREE RESOURCES HERE" is white on an almost-white background, so it is practically invisible.

Resources page. The faint white line above the three headings is the invisible text.

HOW TO FIX

Use a deeper teal (for example #2D6F70) or plum behind white text, and make the Resources line plum.

Sign-up boxes have no labels

FIX SOON

The name and email boxes in the homepage and newsletter sign-ups rely on grey placeholder text that disappears as soon as someone starts typing. Screen readers may not announce what each box is for.

HOW TO FIX

Add a visible label above each box. The Contact page form already does this well.

Icon links have no name

NICE TO HAVE

The social icons in the footer and the icons on the homepage cards are announced to screen-reader users as just "link".

HOW TO FIX

Add a short label to each, such as "Rebecca Kase on Instagram".

SECTION 7

07 Content polish

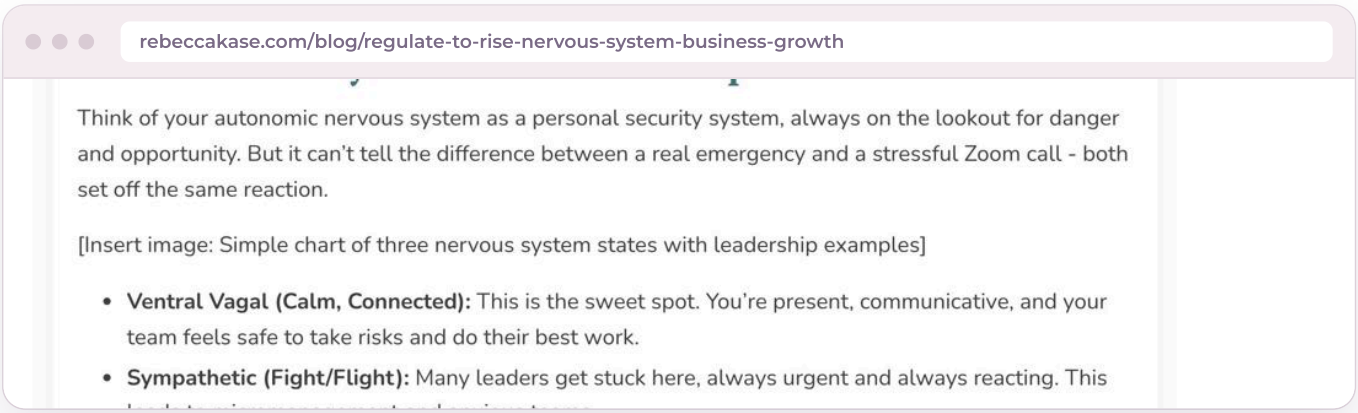

66 FAIR

Small details shape how polished a brand feels. These are quick fixes, but visitors notice them.

An unfinished note is visible in a published article

FIX NOW

The article Regulate to Rise: How a Healthy Nervous System Fuels Business Growth shows a writing note to readers: "[Insert image: Simple chart of three nervous system states with leadership examples]".

As it appears today on the live article.

HOW TO FIX — Add the chart, or delete the line.

Articles promote offers that are no longer available

FIX NOW

- The Nervous System Advantage says "The Business Accelerator Toolkit is launching soon" and links to a waitlist page that no longer exists.
- 5 Daily Habits to Support a Neuro-Informed Lifestyle invites readers to "Check out my upcoming course".
- Five articles promote a Nervous System Reset Course, and two a Nervous System Reset Toolkit, whose pages are gone (see Section 1).

HOW TO FIX — Point these calls to action at what you offer today: the Thrive Workbook, the free Foundations guide, speaking or Corporate Programs.

Kajabi's placeholder pop-up text is hidden on 17 pages

● FIX SOON

An unused pop-up still contains Kajabi's placeholder wording: "Join Our Free Trial. Get started today before this once in a lifetime opportunity expires." Visitors do not see it today, but it sits in the page code that Google reads, and one wrong setting would put it on screen.

WHERE Pages including Books, Thrive the Workbook, Contact, Podcast, Resources, About (older), Speaking (older) and the test pages.

HOW TO FIX Delete the unused pop-up from those pages.

The footer says "Kajabi" on some pages

● FIX SOON

The footer reads "© 2026 Kajabi" on 8 pages (the test and opt-in pages), "© 2026 The Rebecca Kase" on the 3 thank-you pages, and the Press page has an extra © at the end.

HOW TO FIX Set the footer text to "© 2026 Rebecca Kase" everywhere.

Smaller slips worth a minute each

● NICE TO HAVE

- "Powered by Kajabi" appears at the bottom of every page. Check the footer settings: Kajabi usually lets you hide it.
- On the About and Speaking pages, "The Trauma Therapist Institute©" uses the copyright symbol. Business names usually take ™, or ® once registered.
- The PESI link on Explore My Work carries a Google tracking code (?srsltid=...). The clean address is pesi.com/speaker/rebecca-kase-1099880.
- The Trauma Therapist Institute link in the main menu starts with http:// instead of https://. It forwards correctly, but the secure address is cleaner.
- The dead Business Accelerator waitlist address is also misspelled ("accelator").

SECTION 8

08 Trust & legal

50 NEEDS WORK

For a clinician writing about trauma and mental health, trust is the heart of the brand. A few standard pages are missing.

No privacy policy or terms page

FIX NOW

Name and email sign-up forms appear across the site (the homepage alone has two), the Contact form collects messages, and the site sells the Thrive Workbook. Yet there is no privacy policy, terms of use or similar page, and nothing in the footer links to one.

Privacy laws (including California's) generally expect a privacy policy wherever personal details are collected, and Google's reCAPTCHA terms ask sites to let visitors know it is in use.

HOW TO FIX

Add Privacy Policy and Terms pages and link them in the footer. A reputable template is a fine starting point; a lawyer can confirm the details. This report is general guidance, not legal advice.

No "education, not therapy" note on mental-health articles

FIX SOON

The articles discuss trauma, anxiety and PTSD. Only one of the 20 (Why Your Best Ideas Come in the Shower) includes a line saying it is not a substitute for professional care.

HOW TO FIX

Add one short line to the blog template, for example: "This article is for education only and is not a substitute for therapy or medical care."

The footer has no contact details or page links

NICE TO HAVE

The footer shows the logo, copyright and social icons only. The support email appears only on the Contact and Press pages.

HOW TO FIX

Add Contact, Privacy and Terms links and support@rebeccakase.com to the footer, so they are one click away from any page.

YOUR ACTION PLAN

A simple order to work in

Tick items off as they are done. Almost everything here can be done inside Kajabi, without a developer.

THIS WEEK

Quick wins

About 3 hours

- [ ] Fix the 9 broken links to your own pages (Section 1)
- [ ] Rename "About 2026", "Speaking 2026" and the other titles in Section 5
- [ ] Delete the "[Insert image]" note in Regulate to Rise
- [ ] Correct "Nuero" and "Kate" in the old menu
- [ ] Replace the Kajabi Twitter link on the workbook page
- [ ] Unpublish Home Page 1 to 3, the Blank Pages and the opt-in test pages

THIS MONTH

Bigger fixes

About a day in total

- [ ] One menu on every page, with your offers in it
- [ ] Resize and compress images, starting with Speaking, Explore My Work and the homepage
- [ ] Add Privacy Policy and Terms pages, linked in the footer
- [ ] Replace or remove the 11 dead source links
- [ ] Update "launching soon" calls to action to current offers
- [ ] Fix the phone layouts and the About and Explore My Work intros
- [ ] Fill or unpublish the Store, and retire the duplicate About and Speaking pages

WHEN YOU HAVE TIME

Polish

An hour here and there

- [ ] Add descriptions (alt text) to images
- [ ] Add missing page descriptions and one main heading per page
- [ ] Delete the unused pop-ups and fix the footer text
- [ ] Deeper teal behind white text; labels on sign-up forms
- [ ] Tidy article addresses, tag spellings and image file names
- [ ] Submit the sitemap in Google Search Console and add structured data
- [ ] Hide thank-you pages from search; add an education note to articles

0 of 20 done

PLAIN-ENGLISH GLOSSARY

Words used in this report

Broken link
A link that leads to a page that no longer exists, so the visitor sees "Page not found".

Page title
The blue headline Google shows for a page in search results. It is also the text on the browser tab.

Page description
The one- or two-line summary under the title in Google results. Also called a meta description.

Main heading (H1)
The single biggest heading on a page. Google uses it to understand what the page is about.

Alt text
A short written description of an image, read aloud by screen readers and used by Google.

Page size
How much a browser downloads to show a page, measured in megabytes (MB). Smaller pages load faster.

Contrast
How much text stands out from its background. Low contrast is hard to read, especially on a phone in daylight.

Sitemap
A list of all your pages that helps Google find them. Yours is at rebeccakase.com/sitemap.xml.

Structured data
Hidden labels in the page code that tell Google facts directly, such as your name, books and profiles.

Google Lighthouse
Google's free checking tool. It grades a page on speed, accessibility, search basics and best practice.

Layout shift
When content jumps around while a page is still loading.

reCAPTCHA
Google's spam checker for forms, shown as a small badge in the corner of the screen.

HOW THIS CHECK WAS DONE

50
pages from the sitemap checked for errors, titles, headings, images and template leftovers

428
links tested automatically, and every broken one checked a second time before it went into this report

21
key pages viewed on a 1440px laptop screen and a 390px phone screen, and weighed on a fresh first visit

10
key pages run through Google Lighthouse for accessibility, search basics and best practice

Checked on October 22, 2026. Websites change, so a link that worked or failed on this date may behave differently later. Outside sites that block automated checks (such as Facebook, LinkedIn and some journals) were not counted as broken.
